It offers an extensive array of functions for ecological modeling, packed in an intuitive interface. US "biotechnology" is named in a US patent application filed in 1998 and granted in 2002. It has attracted some controversy because of the inclusion of humans in the claim. The Merriam-Webster Dictionary defines "biotechnology" as: biotechnology, n. - the branch of science that deals with the living world: applied biology, the sum of biotechnology, biology, and technology. The suffix, -technology, in the new name seems to make a somewhat strident claim that life, or at least life in a certain form, is an invention of a human, and not of the living world.
