Category:Adobe Photoshop softwareQ: How to parse an XML file and get specific element value using VB.NET I have an XML file like this : 12345 sometest notes I am new to XML and I would like to find out which user's name is enclosed in tag and which is in tag. Thank you A: Using this XPath 2.0 expression: //UserName[1] //UserName The expression will point to the first tag, the second tag and all tags. Go Captain Obvious I must make a concerted effort to not fall victim to the overused cliché, "I didn't see that coming." In other words, this couldn't have been predicted. However, I will say that somehow I sensed this wouldn't be our performance. We played six solid quarters before it all fell apart. I thought we battled back from a 15 point deficit at halftime and had a chance, but the wheels fell off and we turned it over too much and didn't close the game out. Let's take a look at some statistics from the game: Minutes:41 Second Chance Points:15 Second Chance Points in Three Minutes:2 Halftime Opponent Score:42 Halftime Opponent Score in Three Minutes:40 Neither of us were the same after halftime. It's like we were in a tornado and we couldn't get our bearings. It was all over the place, then all back to nowhere. I'm not saying we didn't play our hardest at times, but we didn't play any better. When you're down by fifteen and get outscored in the third quarter by more than you score in the first, you know things are going south. Periods: G 1cb139a0ed
