KEYMACRO Description: Keymacro is a free key logger, screen recorder, live streaming and webcam screen capture software for Windows 8.1/8/7/Vista/XP and Mac OS X. The best screen recorder and live streaming software!.. Keymacro is a free key logger, screen recorder, live streaming and webcam screen capture software for Windows 8.1/8/7/Vista/XP and Mac OS X. The best screen recorder and live streaming software!.. Recovery Agents undelete files that are deleted from your computer. When you delete a file from your hard drive, it gets moved from the directory where the original file was located to a hidden area on the drive where your data gets overwritten with the next bit of data to be written to the disk. You may have noticed that the file is not there and when you try to recover it, you see the message: "Deleted File Could Not Be Restored." In most cases, this happens because the deleted file was first moved to the "Trash" folder and then to the Hidden Files area on your hard drive. The Trash is hidden by default, which makes it hard to recover files that are there. To quickly locate the file that you want to recover, use the following method. The program will scan your hard drive and display the deleted files that can be recovered. You can restore those files and save them in a different location on your hard drive. Some more features: You can search for files and folders using keywords, file types, file dates, file sizes, file names, and other data that helps you narrow down the search results to the files that you want to recover. You can even preview files. The program displays a log of the files that it recovers and how it recovered them. You can restore the deleted files in various ways: All, Restore, and Refresh. The program will give you an option to specify the location where you want to store your recovered files. It also has an option to view the recovered files by
