

World City Names Database Crack + Full Product Key Download For PC [March-2022]

The longest running comprehensive list of all cities and towns and townships on the internet. The complete list includes 3 data formats, cities/towns and townships (Geographical information including latitude and longitude), list of sites and sites data (Unique Geo-locations of all facilities including hospitals and schools) and List of authorized cities and towns (All world cities listed for each country and region). The main table contains 2.79 million cities, towns, townships and sites. The database also contains country/region lists and site lists. Each contains the name of the city/town or township, state and province or state/country/region/area/city and it's latitudes and longitudes. City/Town and Township Data Format: Each countries data is divided into 10 US States (or Provinces) and the provinces (States) from the top down and is based on the ISO 3166-1 alpha-2 country code. States are divided into sub-countries from the top down. This is to create a more accurate sub-region/country/city/town/township or county data. Each city or town with it's latitudes and longitudes are linked to a large number of unique sites that are linked and validated by latitude and longitude to provide the means for easy location of unique sites or community facilities. There is also a unique site for each city/town. Each site is linked to a unique site in the site table. Site Data Format: Each site is linked to a state/province/country and region/city/town and its unique latitudes and longitudes. All unique location points of a site are linked to a site. Each site has a unique identifier. The City/Towns and Townships database contains many more cities, towns and townships than any other database on the web. Cities, towns and townships are uniquely grouped based on latitudinal designations such as North, South, East, West, Midlands, etc. Product Details Product Description Product Details The longest running comprehensive list of all cities and towns and townships on the internet. Recent world cities The database comes with a set of web-application, which allows to find countries, cities and territories by a list of frequently used search criteria, such as name, latitude and longitude, area, population and GDP. The database includes 246 countries and their local subdivisions. The database includes numbers of world cities and places that are over 4,500.

World City Names Database (WCND) was first created by javac in 2003. Under the terms of the GNU Public License (GPL) v2, it is free to use, modify, copy and redistribute in any medium and for any purpose. For more information, please visit our 6a5afdb4c

World City Names Database License Code & Keygen

The World City Name Database provides world city names, which are used to refer to the different cities and places of the world. The database can be used in a number of ways depending on the wishes of the person who uses it. This allows for a very large potential range of applications. The database includes the cities and places of all countries and regions of the world. The database may be used to populate a website with location-specific content. The data may also be embedded in a web page, or used in an application. It can also be used to create a website that lists the cities and places of the entire world. World City Name Database Contents: The World City Name Database includes World city names for 195 different countries, regions, cities, and places around the world. The database contains the cities, places, and countries of the following regions: Countries: 195 Americas: 3 Central America: 1 North America: 37 South America: 61 Asia: 50 Central Asia: 5 Eastern Asia: 68 Western Asia: 51 Northern Asia: 11 Southern Asia: 21 Australia and Oceania: 1 Southeast Asia: 1 South Asia: 1 Arab World: 1 The Arab World includes the following countries and regions: Countries: 1 North Africa: 1 East Asia: 7 Eastern Asia: 68 Southeast Asia: 1 South Asia: 1 Southwest Asia: 1 Oceania: 1 Western Asia: 51 Cities and Places: 722 Afghanistan: 1 Algeria: 1 American Samoa: 1 Angola: 1 Antarctica: 1 Argentina: 14 Australia: 1 Austria: 1 Barbados: 1 Belgium: 1 Bhutan: 1 Bolivia: 1 Botswana: 1 Brazil: 1 British Indian Ocean Territory: 1 British Virgin Islands: 1 Bulgaria: 1 Burkina Faso: 1 Burundi: 1 Cambodia: 1 Canada: 10 Chile: 1 China: 1 Colomb

What's New In?

This file contains 2 main databases, named CITIES and REGIONS. The CITIES database was originally developed from the city database created by the World Census in 2000. In this way, when this database was created, it took the data from all places where the World Census was conducted. The REGIONS database was created by splitting the World City Names Database data from the above file into several countries and regions in order to have an easy to search with less data. World City Names Database Key Features: The World City Names Database is an unparalleled, unique and complete database containing a single source of latitude and longitude coordinates for the entire world. The data is in a flexible and easily searchable format which is easy to publish on your website or in your application. The package contains the world city data in readily executable files which can be run from SQL query tools like MySQL browser. The data is ready to be published on your site, application or in content management system of your choice. The "world-city-database-regions.sql" script was split to contain all countries and regions that can be used as individual files or running in any sequence. The CITIES database contains the data of all world's cities, their latitude and longitude, city name and population. The REGIONS database contains all the world's regions, their latitude, longitude and city names. The world city database has cities in 246 countries and regions. The CITIES and REGIONS tables together contain a record for each world city and region. The database files are conveniently sorted to contain cities and regions into manageable parts. The files are created by the "SORT CITIES - ROUTE" and "SORT REGIONS - ROUTE" SQL commands. All files are sorted in alphabetical order, and all cities and regions are aligned between countries. A huge file "world-city-database-regions.sql" contains all data from the database. The "world-city-database-regions.sql" file was split to contain the cities in the countries in alphabetical order and the regions in order of the alphabetical order of the city names. The data is sorted to contain the countries, regions and cities. The rows are sorted first by cities, then by countries and then by the name of the region. Thus the alignment is done first by the country and then the region of the cities in that country. World City Names Database Version History: Version 1.0 200006-05-

System Requirements For World City Names Database:

-OS: Windows 7 64-bit -Processor: Intel Core i3 2.6 GHz or equivalent -Memory: 4 GB -Graphics: OpenGL 2.0 -DirectX: Version 9.0 -Network: Broadband internet connection -DirectX Version: DirectX 9.0c -Additional Requirements: Internet access. Use of this software implies that you accept the terms of the DirectX End User License Agreement and the Windows Media License Agreement.
