What's New in the AutoCAD?

Extend your AutoCAD user experience with a new command—Markup Import. Now, import external design elements and annotations directly into your CAD drawings, preserving the original formatting and annotations. Markup Import also works with other, previously supported, annotation files. Annotation Assistant: Be more productive with powerful tools to edit and annotate drawings. Easily highlight, annotate, and edit features and dimensions in your drawing with dynamic annotation options, such as relative dimensions and annotate dimensions. With Annotations Assistant, you'll be able to highlight or annotate objects in your drawing, view in-context dimension tags, change the text and text size, and more. You'll be able to click-and-drag annotate objects—and their labels, if you choose—to reposition or edit your annotations. Clipboard enhancements: Now, any AutoCAD® drawing feature—or text— you copy or cut and paste in AutoCAD® can be pasted as a layer. With a new shortcut key, Layer Paste, you can instantly create new layers and insert the copied drawing into an existing drawing. The Clipboard History button shows you all past drawings you've copied or cut and pasted. See all drawing tools that are compatible with the current drawing in the drawing toolbox window. You can now search for a specific drawing component—for example, point style, command, font, or tool. You can also search for all drawing components in the drawing file, or just for drawings created from a specific template. Creating and Modifying 2D Drawings: Improvements in 2D drawing: Modify shape sizes, offsets, and other attributes in all viewports with the new Design | Properties | Layers & Selection dialog. Or, use the new Design | Properties | Geometry command to modify any drawing element's properties. Insert external objects more easily, with a new command—Insert Clipboard Component. With a new dialog, Draw | Place, you can quickly and easily insert the external object you want to place. AutoCAD Create and Edit: Create a new 2D drawing using the new Draw command. New commands provide the ability to easily edit a drawing: Update the drawing, using the new Undo command; Re
