Q: Is there a way to change the application icon while running? I know how to change the icon, using this, when the application is launched: `System.Drawing.Icon.FromHandle(new System.Drawing.IconInfo.FromFile(Application.ExecutablePath)).Icon = "Icon1.ico"`; After some time it will change to the Icon which I want. But I would like to set the icon while the application is running. How can I do it? This might be the duplicate of this question. UPDATE The correct code to set the icon dynamically is this:

```
Windows.ApplicationModel.Package.Current.Resources.MergedDictionaries.Add("myRes", myAppx);
Application.Current.Resources.MergedDictionaries.Add("myRes", myAppx); Application.Current.Resources["myRes"]
= new BitmapImage(new Uri("MyIcon.ico", UriKind.Relative));
```

The `Uri("MyIcon.ico", UriKind.Relative)` is the location of the icon, but when it runs it doesn't find it. Maybe I'm doing something wrong? UPDATE 2 In my case the icon was located in the "images" folder of my project. Therefore I called the location the same as the project's location.

A: You can change the icon of the application when it is actually running by setting the icon of the `Application.Resources.MergedDictionaries` collection. What this does is this:

`Application.Resources.MergedDictionaries` is a property that always contains a list of dictionaries. Each dictionary has a name, and can contain string, resource or class type items. For each string, it will create a `ResourceDictionary`, and put the string into it. For each resource, it will create an instance of a `ResourceDictionary` for each .xaml file in the assembly. For each class, it will create an instance of the class and set the class's `Icon` property. To change the icon of an application while it is running, you can set the icon using the above method. The path to the icon can be just the name of the icon, or you can use relative paths. For example, you can either use: `public const string IconPath = @"Content\MyIcon.ico"`; Or, if you

Q: `c# String.Split` get error, not found Tried to debug but doesn't work, any help will be awesome. `string[] parts = list.Split('.')`; `System.ArgumentException: String contains more than one period.` A: Change: `list = "First.Second.Third"`; To: `list = "First.Second.Third"`; You can't have a period inside a string. The reason it was trying to figure out a. inside the string is because it actually did a split on the string. The error is that a period means an end of a string, and string isn't a string. Q: Changing date format in time series regression model in R I have to perform a time series model for this data: `Date,Ret,Vi` 01/11/14,12,1 02/11/14,13,1 03/11/14,14,1 04/11/14,15,1 05/11/14,14,1 06/11/14,15,1 07/11/14,14,1 08/11/14,12,1 09/11/14,14,1 10/11/14,14,1 11/11/14,13,1 12/11/14,12,1 01/11/15,12,1 02/11/15,13,1 03/11/15,15,1 04/11/15,15,1 05/11/15,14,1 06/11/15,12,1 07/11/15,16,1 08/11/15,16,1 09/11/15,15,1 10/11/15,13,1 11/11/15,12,1 12/11/15,14,1 01/11/16,15,1 02/11/16,16,1 03/11/16,16,1 04/11/16,15,1 05/11/16,15,1 06/11/16,15,1 07/11/16,15,1 08/11/16,16,1 09/11/16
