Awesomenauts is a fast-paced, team-based action game where 75 alien invaders are stopping at nothing to conquer Earth! Earth's only hope is an armada of fighters who have been summoned by the Lemurian Star Syndicate to take them on! As the commander, you'll lead your fighters in their assault on the invaders, collecting enough blue cores to upgrade your ships and unlock new ships.

Developed by one of Double Fine's founding team members, Eric Chahi, and the acclaimed composers of LISA, Lee Frain and Joshua Mowrey, Awesomenauts is a mix of action, comedy, and martial arts. Key Game Features: 4 vs 4 multiplayer action. Play online with your friends or go head to head in local splitscreen. Use key-combo moves to perform devastating, ridiculous attacks on your opponents. When the enemy is looking down at the ground, you can use their head as a target for an air-based attack! An unlockable upgradable roster of 75 playable characters with unique abilities, each with their own signature moves. Unleash the power of the Uzume, the God of Destruction, or the telepathic Annihilator. A fully destructible environment. Destroy and rebuild the battlefield to create new strategic opportunities! A huge arsenal of weapons. Blast your opponents with everything from electric shotguns, ammo beakers, and rockets to flamethrowers, lasers, and bio-teleporters. Customize your ship with over 3,000 components that have unique upgrades and abilities. Get your boots to face-off in split-screen local play to experience the awesomeness of the Awesomenauts interface. Accessible in the main menu and DLCs section. About Eric Chahi and Double Fine Productions: Eric Chahi is the chief executive officer of Double-Fine Productions. Double Fine's Double-Fine's Double-Fine's

The Nzerd-Gratch race is an intelligent fungus people that live in the deserts of the world. They are not traditional grunts but a stone-like race that are capable of incredible strength and agility thanks to a root that can be found on their backs and help them when they are under extreme stress. The Gratch create a path through the desert and some even build structures. They are wild and savage and live in tribes. They live off what they can find and hunt the desert beasts. They hunt now and then build an Oasis. The Nzerd can breed with other races to form Nz-Graths. The Nzerd-Gratch are now added to the game! They can be tamed and can be brought into the Gratch Caves. They are a small faction that supports the Nzerd Race for now. By HartNetHDress Watch 235 Favourites 34 Comments 14K Views Animus is working again! As for why it's called Abyssal Swiggins? Well, the description reads "On cold nights of the year, Swiggins would playfully swim in the Abyssal Bay at the bottoms of the cages." This is not even my fave one, so please don't be mad I made a different one. 2015's GDC Artstation Animation Contest winner! The interfaces between implanted biomaterials and dentin tissue are of great importance and have drawn much interest in clinical and basic studies. In this study, poly(D,L-lactide) (PDLLA) and hydroxyapatite (HA) were

chosen as the dental biomaterials. Highly ordered porous HA nanocoatings were obtained by the electrochemical deposition method, and the influences of the anodization time and anodization voltage on structure and hydrophilicity of the surface were studied. The three-dimensional morphology, roughness, and hydrophilic property of the coatings were investigated through scanning electron microscopy, atomic force microscopy, and contact angle measurement, respectively. Then the prepared nanostructured coatings were used as interfaces between the HA biomaterials and dentin. The research results showed that highly ordered ultrathin HA coatings can be prepared by the anodization method, and the coating modified well with human dentin proteins. An increase of the anodization time results in the HA coating with smaller pore size; however, the ion dissolution of Ti, inhibition of the protein adsorption and on bioactivity greatly decrease at higher anodization voltage. The wettability, roughness, and surface energy of the obtained HA coatings are also modified by anodization. The modified HA coatings can improve the formation of the hydrogen bonds with organic chain structures of human dentin proteins, modulate the interactions between the coating and dentin tissue, and strengthen the binding forces between the coating and dentin. # Understanding Models As a machine learning model, a TensorFlow model

I recently found out that I have a clone villager with a donkey, a gun, a scroll, and some UI. To quote his namespie, I have two options.

***Dump the villager (Ouch)**

***Dump the sprite (Sorta Fine, might change)**

So how do I extract the contents of the villager?
