The Elden Ring Game is a fantasy action RPG by Gust in development. An action game in which the player takes on the role of a hot-blooded warrior who must move through a vast world filled with excitement and exhilarating battles. The narrative combines the level designs of action role-playing games and the strategic movement of turn-based role-playing games, while adding new gaming elements to the turn-based game genre. With its original scenario and multiple endings, the narrative has a depth lacking in typical action games. We will be revealing all of this and more in the upcoming months! © 2018 DMM.com POWERCHORD STUDIO/KADOKAWA CORPORATION PRODUCTION CO., LTD. BUNBUN PICTURES © KADOKAWA CORPORATION NOVELTY

Fatal autosomal recessive cerebellar ataxia in Italy: a new paroxysmal disease. In the last decade, various descriptions have been published of progressive cerebellar ataxia in which mutations of the gene encoding the beta subunit of the cyclic AMP-dependent protein kinase (PRKC(A)) have been found, named the cerebellar ataxias or the ataxia syndromes. We describe the genetical, biochemical and clinical findings in two unrelated Italian families, in which the rare autosomal recessive form of cerebellar ataxia has been identified. The first family, with parents and two siblings affected, is referred to here as Family A. The other family, with parents and three affected children, is referred to here as Family B. Age at onset of the disease in the two kindreds was 4 and 8 years for siblings in Family A, and 3 and 6 years for parents and affected children in Family B. Among the manifestations of the disease that may be present in all members of these kindreds were severe gait and limb ataxia, truncal instability, dysarthria, pyramidal signs and axial impairment. EEG showed general slowing, and the results of visual evoked potentials were compatible with central involvement. Both our families, and particularly the Family A, showed a very severe clinical picture with a mean survival time to death of 13.7 years. The clinical presentation was different from the previously described ataxic syndromes in having a different course with an earlier and more severe evolution. Among the mutations reported in these families, the K58I mutation was present in the affected patients
